Functional and hemodynamic effects of new sesquiterpene lactones in the anesthetized rat. The present study was undertaken to assess the hemodynamic effects and the effects on functional parameters of three new triterpenoid sesquiterpene lactones obtained from the cortex of *Helichrysum* species. The effects were compared to the $\alpha(2)$ -agonist *m*-trifluoroethylphenyldimethylmethoxamine, to the antagonist prazosin and to the calcium-channel antagonist nifedipine. For the determination of hemodynamic effects, the following parameters were measured: mean blood pressure (MAP), left ventricular systolic blood pressure (LVSP), left ventricular end diastolic pressure (LVEDP), heart rate (HR), left ventricular (LV) dP/dtmax, LV dP/dtmin, RV dP/dtmax, and RV dP/dtmin. All sesquiterpene lactones examined caused hypotension, bradycardia and an increase in RV dP/dtmax and RV dP/dtmin. The hypotensive effect was antagonized by prazosin whereas the increase in RV dP/dtmax and RV dP/dtmin was antagonized by nifedipine. Compared to *m*-trifluoroethylphenyldimethylmethoxamine the sesquiterpene lactones did not reduce HR (in contrast to *m*-trifluoroethylphenyldimethylmethoxamine), increased LVSP (in contrast to *m*-trifluoroethylphenyldimethylmethoxamine) and caused no increase in LVEDP, a characteristic feature of $\alpha(2)$ -agonists. The sesquiterpene lactones used did not show antagonist properties towards $\alpha(1)$ -adrenoreceptors or $\alpha(1)$ -

Is the Internet the new world order? Does globalization have a future? What is so bad about it? Profoundly skeptical of liberal trade policies, this book explores how critics of globalization aim to defend the interests of local communities against New York: Routledge, 2009. 196 pp. \$40.95 US Hardcover Reviewed by Scott Hardin, University of Colorado Multinational corporations' struggle for hegemony over both the economy and the world web have featured in the pages of this journal for a number of years. So-called transnational corporations, or TNCs, have been accused of increasing unemployment and of contributing to global poverty. More controversial is whether TNCs' hegemonic reach threatens world peace and, more broadly, whether globalization constitutes the next stage in human history. Against these concerns, these authors emphasize the positive attributes of TNCs in the conduct of international affairs. They focus on the strategies employed by TNCs to resist pressure to liberalize trade and to improve the world web's social and economic relations. In the book's 12 essays, TNCs are depicted as beneficial. The authors claim that TNCs help improve the quality of goods, stimulate local communities, and promote greater equality. Indeed, they insist that a highly regulated global economy, in which governments have more power to enforce domestic rules and regulations, is the only sensible model for the world web. This isn't to say that TNCs have escaped a severe beating in the book. Texts by Systime, Brinkworth, and Pleydell-Bouverie provide overviews of globalization's successes and failures.
